

Ayush Kumar

+91-6307715440 | kunalayush30@gmail.com | Ahmedabad, Gujarat

PROFESSIONAL SUMMARY

Junior Software Developer skilled in Python, JavaScript, and MySQL, with hands-on experience building scalable web applications, real-time data pipelines, and ERPNext/Frappe customisations. Experienced with AWS (S3, Lambda, EC2, CloudWatch) across industrial telemetry and enterprise systems. Currently exploring RAG, Agentic AI, prompt engineering to expand expertise in modern AI technologies.

SKILLS

Languages: Python, JavaScript, PHP, SQL, HTML, CSS

Frameworks & Libraries: Laravel, React.js, Frappe Framework, Web Frameworks

Cloud & DevOps: AWS (Lambda, EC2, S3, CloudWatch), Docker, Linux

Tools & Platforms: Git, MySQL, REST APIs, ThingsBoard, Monitoring Tools, Application Integration

EXPERIENCE

Junior Software Developer | Keepsake Automation / September 2024 – Present / Ahmedabad, Gujarat

- Developed and maintained web applications using PHP Laravel and MySQL, creating a Welding Data Management System with parent-child relational database architecture.
- Customized ERPNext modules with Frappe Framework (Python/JavaScript) to implement role-based employee assessment portals and workflow-driven evaluation systems.
- Engineered an industrial telemetry system using ThingsBoard with real-time device integration and custom widget dashboards for live operational monitoring.
- Built AWS cloud file pipelines for field devices to upload telemetry data via FTP to EC2 instances, automating file transfers to S3.
- Developed Lambda-based automation for parsing file names, creating structured S3 folders, and generating automated file summaries.
- Authored SRS documentation, system architecture diagrams, and end-user manuals while managing version control through Git.
- Developed responsive cross-browser web interfaces using HTML, CSS, and JavaScript for optimized user experience.

Intern | Frontend Web Developer | Orinson Technology / July 2024 – September 2024

- Built responsive UI components using HTML, CSS, and JavaScript for client-facing web pages.
- Collaborated with the development team to implement design mockups and improve cross-browser compatibility.

EDUCATION

Bachelor of Technology (B.Tech) — Information Technology | Greater Noida Institute of Technology | August 2024

PROJECTS

WeldMetrix — Industrial Telemetry & AWS File Pipeline

Tech Stack: ThingsBoard, AWS S3, Lambda, EC2, CloudWatch, Transfer Family, Python, Linux

- Designed telemetry monitoring integrating physical devices with ThingsBoard; built FTP-based ingestion pipeline to auto-process and transfer files from EC2 to S3.
- Built Lambda functions for structured S3 folder generation and automated file summaries; reduced telemetry storage costs by 50%+ by offloading data from ThingsBoard to S3.

Welding Data Management System

Tech Stack: Laravel, PHP, MySQL, JavaScript, HTML, CSS

- Built a full-stack Laravel/MySQL web app for welding data capture and WPS record management with parent-child relational database architecture.
- Built analytics dashboards to visualize welder performance metrics, improving operational efficiency.

ERPNext Customisations

Tech Stack: ERPNext, Frappe Framework, Python, JavaScript

- Customized ERPNext modules and created custom DocTypes; built a Project Insights Dashboard with progress tracking, overdue tasks, and KPI cards.
- Implemented a portal-based employee assessment system with role-based permissions and workflow-driven evaluation logic.

AI Learning & Experimentation Projects

Tech Stack: Python, LLM APIs, RAG, Agentic AI

- Explored RAG architectures for context-aware AI applications and experimented with Agentic AI workflows, multi-step automation pipelines, and prompt orchestration.
- Built foundational understanding of AI application architecture and AI-assisted development workflows.
